

Technical Data Sheet

Stc 6760

Product Review

STC 6760 is a compound of water based polyurethane and filling agents.

Product Characteristics

Physical state	White dull liquid
pH (solute. 1:10)	8,0 – 9,0
Active Substance	11,5 – 13,5 %
Light Fastness	Good
Charge	Anionic

Benefits & Application

STC 6760 is a special compound made for garment nappa leather and also for shoes.

It has a very good power equalisation of the leather surface and it does not change the normal break of the grain and give a warm and waxy touch feel to the finishing.

STC 6760 is used alone or together with pigments (10% calculated on the weight, concentrated or diluted in water 1:1), applied by roll coater on buffed skins or spraying on full grain.

STC 6760 owns an excellent sticking power as well as good elasticity and resistance to flexometer when finishing has taken place.

The dry film is extremely elastic and can keep defects well stuck without breaking them during mechanical operations.

Handling & Storage

12 months if stored between 5° - 35°C.
